
SUMMER
Light
Summer
Light, cool and effortless.

Are you a *Light Summer?*

Three signs that point to Light Summer. Check them in daylight, without make-up, in front of a mirror.

01 **Silver over gold**
Cool metals and icy whites make your skin look fresh. Gold can look a little yellow on you.

02 **Light is your strength**
Light and mid tones make you glow. Black and very dark shades feel heavy.

03 **Rich, not loud**
Colours with depth work best: not neon, not dusty.

Your metal: Silver or white gold

Your 20 *colours*

Wear these close to your face: shirts, knits, blouses and scarves. Take the hex codes to any shop or app.

Head to toe, *one family*

Build outfits from one colour family. Your strongest colour goes near your face; calmer shades go on trousers, shoes and coats.

Leave these *on the rack*

These shades work against your colouring: they draw attention away from your face. Love one of them? Wear it below the waist, as trousers, a skirt or shoes, where it matters less.

Shop with *confidence*

- Hold a garment under your chin in daylight. Does your skin look even and your eyes brighter? It's your colour.
- Torn between two shades? Pick the one closest to a colour on page 3.
- Online: compare the product photo with your palette on the same screen. Product photos are often warmer or brighter than real life.
- Do a wardrobe check: keep what matches your palette, wear the rest below the waist, sell or give away what you never wear.
- Set the phone wallpaper (included) as your lock screen and you always have your colours with you.

This guide is based on the typical colouring of Light Summer. Everyone is a little different: if a colour from the palette doesn't feel right on you, trust the mirror.
